QRNot DPP

EU ESPR · DIGITAL PRODUCT PASSPORT

Send your products to Europe with their passport.

For exporting manufacturers: a versioned, audit-ready digital product passport in 8 languages that opens via QR / NFC. Enter the data once, print the labels and let QRNot handle the rest.

A CHANGING RULE

Products on the EU market will travel with a digital passport.

01 Under ESPR, digital product passports are being phased in by product group.

02 First concrete step: a battery passport for certain batteries from February 2027.

03 Textiles, iron and steel, furniture and other priority groups are next.

04 The passport must open via a QR code or NFC on the product and stay available for the product’s lifetime.

Timeline

July 2024	ESPR entered into force. Detailed rules per product group are set by delegated acts.
2026	The EU central DPP registry is planned to be set up.
February 2027	Battery passport under the EU Battery Regulation for EV, light-transport and large industrial batteries.
2027 onwards	Textiles, iron and steel, furniture and other priority groups; dates are fixed by the relevant acts.

WHO IS AFFECTED?

Every manufacturer, importer and brand selling into the EU.

For manufacturers exporting to the EU, collecting passport data, publishing it correctly and printing it on labels is new work. Those who start early and can tell customers “we are ready” get ahead.

- Textiles and apparel
- Footwear
- Furniture
- Batteries
- Electronics and appliances
- Toys
- Construction products
- Iron, steel and metals

WHAT IS A DPP?

What is in a passport?

Material composition
Shares, recycled content, source

Origin and operators
Manufacturer and EU responsible operator

Environmental data
Carbon, water, energy, recyclability

Use and care
Washing, cleaning, instructions

Repair and warranty
Warranty, spare parts, repairability score

End of life
Sorting and recycling instructions

Compliance
Certificates, declarations, test reports

Safety
Warnings and substances of concern (SVHC)

Consumers
See materials, care, repair and recycling information in their own language.

Authorities
Reach compliance documents and restricted information with authorised access.

Recyclers
Get dismantling and hazardous-component information from the right source.

SOLUTION

QRNot DPP: enter, publish, label.

01

Enter

Tabbed panel, CSV bulk import, supplier data via link, carbon estimate.

02

Publish

8 languages, versioning, authorised access, machine-readable data.

03

Label

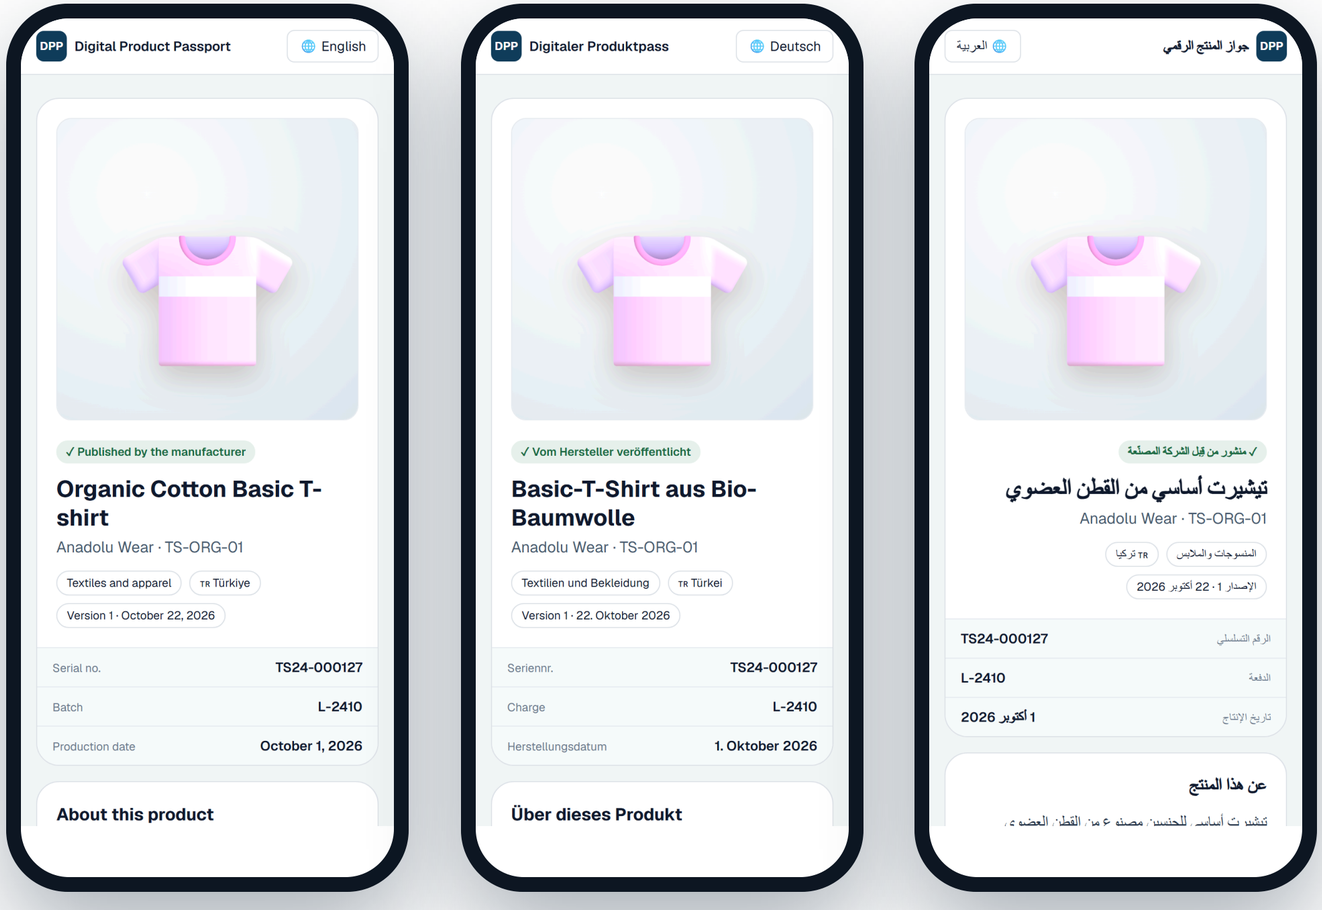

Model / serial QR codes, label printing, GS1 Digital Link, NFC.

- ✓ 8 languages
- ✓ Model and serial level
- ✓ GS1 Digital Link
- ✓ Supplier data portal
- ✓ Carbon estimate
- ✓ Versioned publishing

CONSUMER EXPERIENCE

Everyone reads it in their own language.

No app. Scan the QR with the phone camera or tap the NFC tag; the passport opens in the browser. Visitors pick their language; Arabic is shown right-to-left.

8 languages
TR · EN · DE · FR · ES · NL · AR · RU

Item-level data
Serial number, batch and production date

Documents
Public PDF certificates

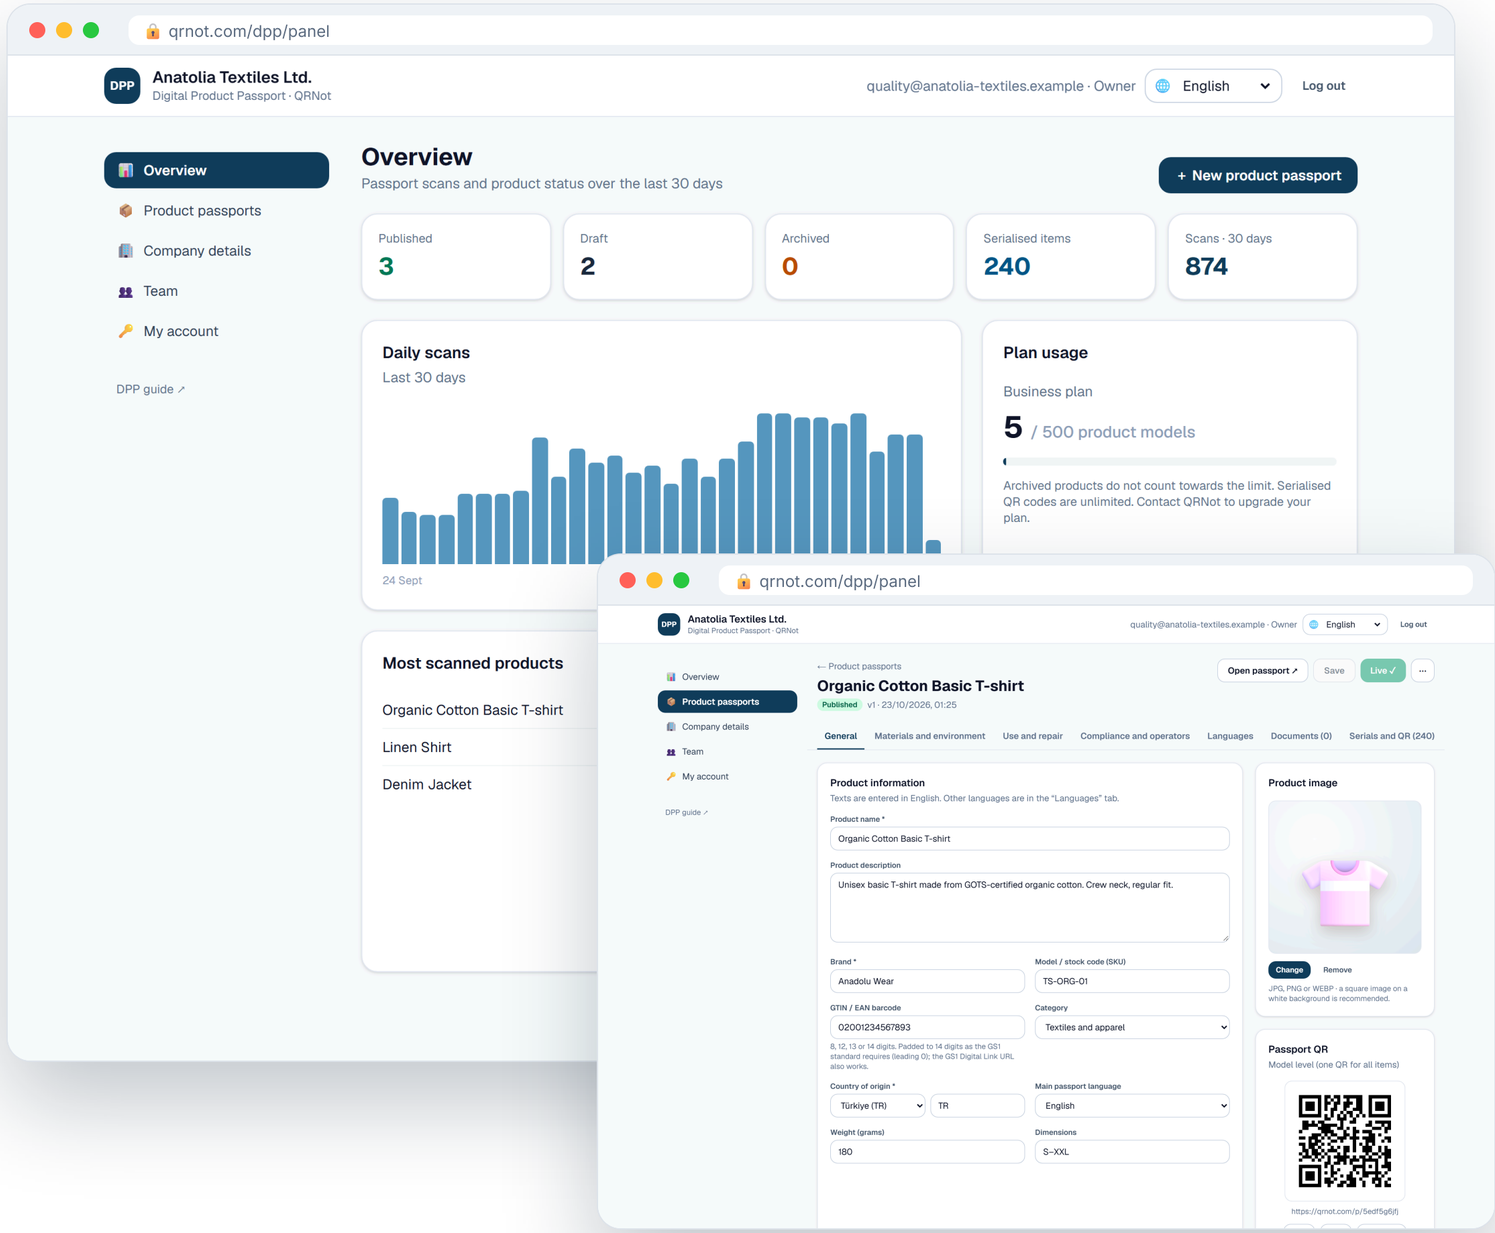

Print / PDF
Print the passport in one click

COMPANY PANEL

All your passports in one panel.

Enter product data in a tabbed editor, upload documents and work as a team. The panel flags what is missing before publishing: if material shares do not add up to 100%, it will not publish.

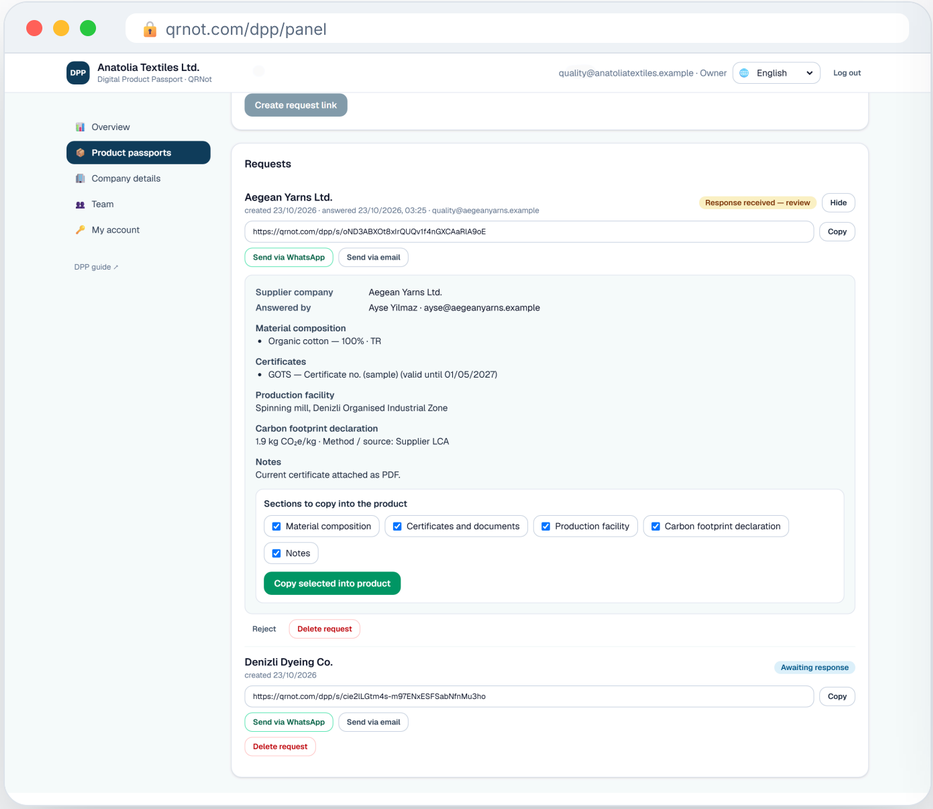

- **Overview** · 30-day scans by country and product
- **Tabbed editor** · Materials, environment, care, compliance, operators
- **Auto-translation** · Translate into 7 languages with AI, review, publish
- **Documents** · PDF / images, public or restricted
- **CSV import** · Add hundreds of products as drafts in one file
- **Team, roles, 8-language panel** · Owner, editor, viewer · the panel itself works in 8 languages

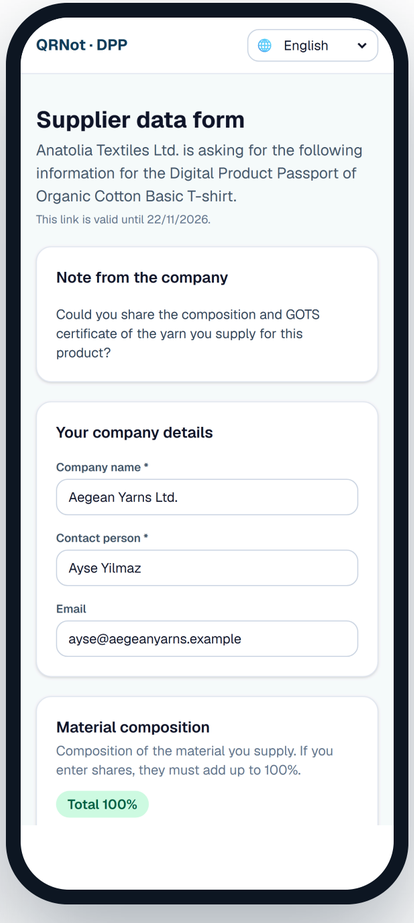

SUPPLIER DATA PORTAL

Let your suppliers fill in the data.

The hardest part of a passport is collecting information from the supply chain. Send your supplier a link: without logging in, in their own language, they enter materials, certificates, facility and SVHC details and upload documents. You review and copy the sections you choose into the product in one click.

01 **Send a link**
Via WhatsApp or email; time-limited and unguessable

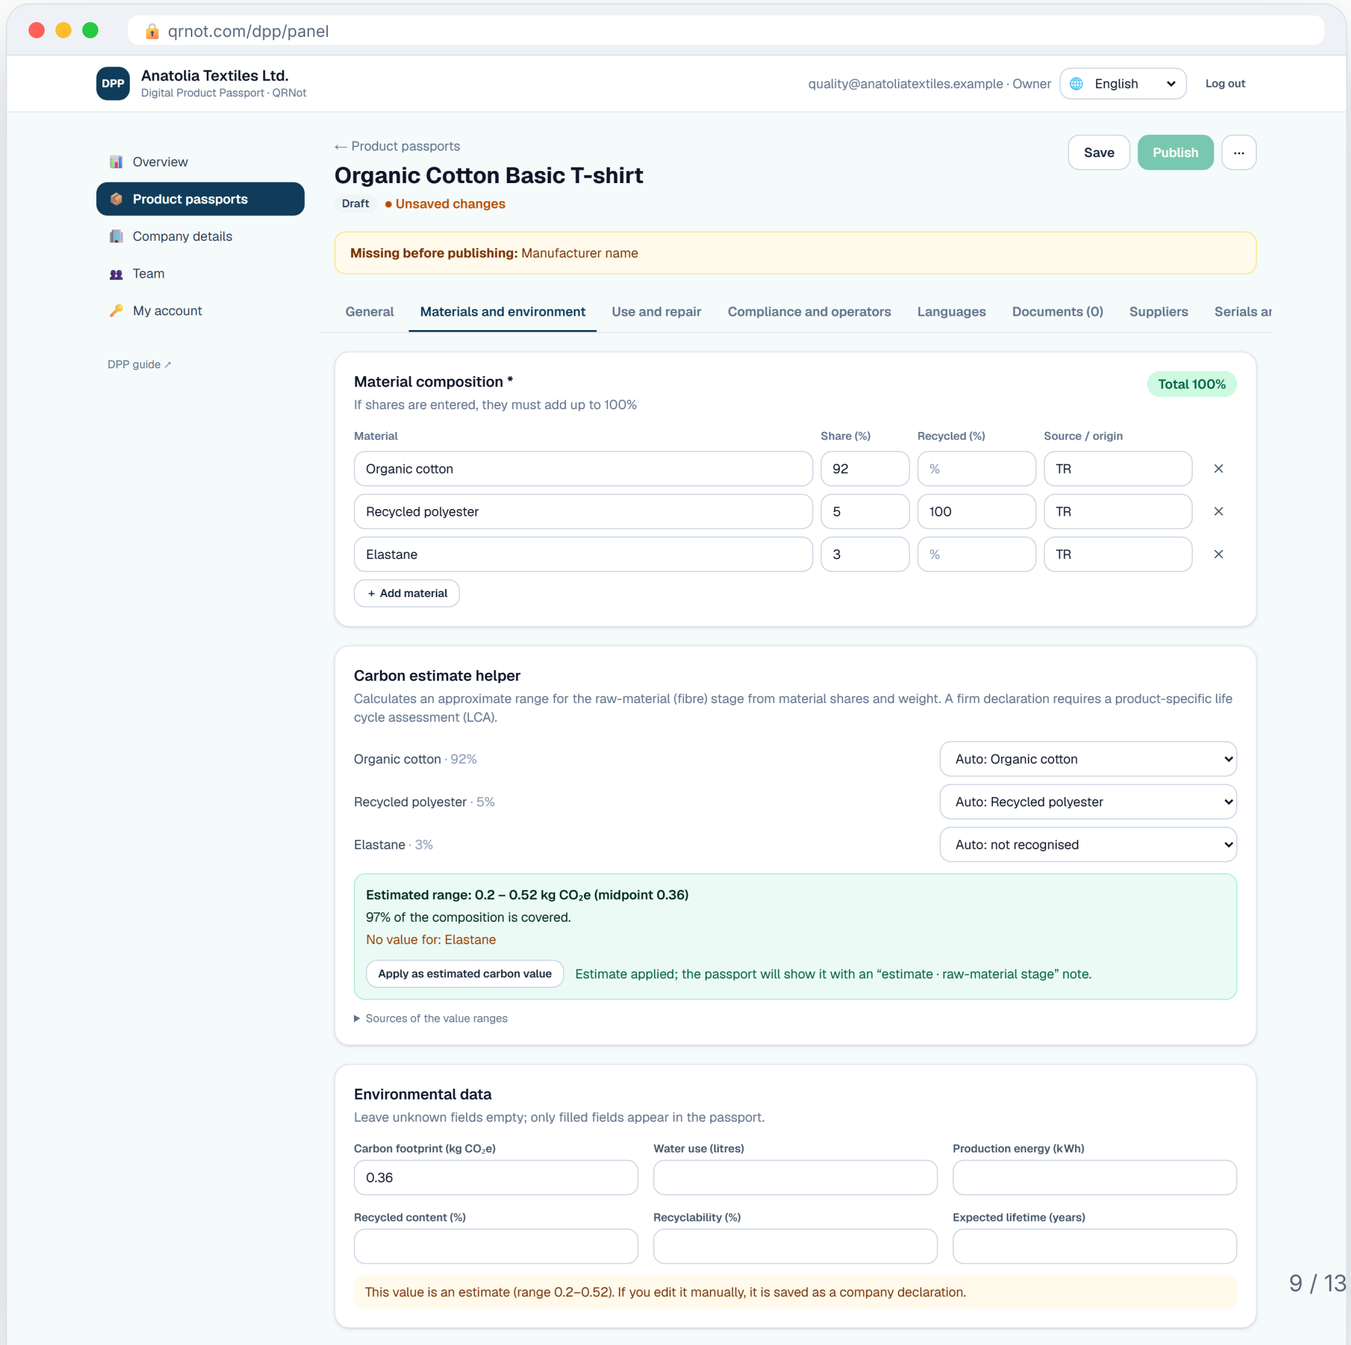

02 **Supplier fills it in**
Form in 8 languages, document upload, declaration

03 **Review and copy**
Nothing reaches the product without your approval

CARBON ESTIMATE HELPER

No carbon figure yet? Start with a sourced estimate.

A range for the raw-material (fibre) stage is calculated from material shares and product weight, with the source of every value shown. The passport clearly labels it as an “estimate”. If you have an LCA, you enter your own value as a declaration.

YOUR DATA IS SAFE

Audit trail
Who changed what and when, including a copy of deleted records

Daily backup
All passport data is backed up automatically every day

Conflict protection

GDPR / KVKK

FROM LINE TO SHELF

Print the label once.

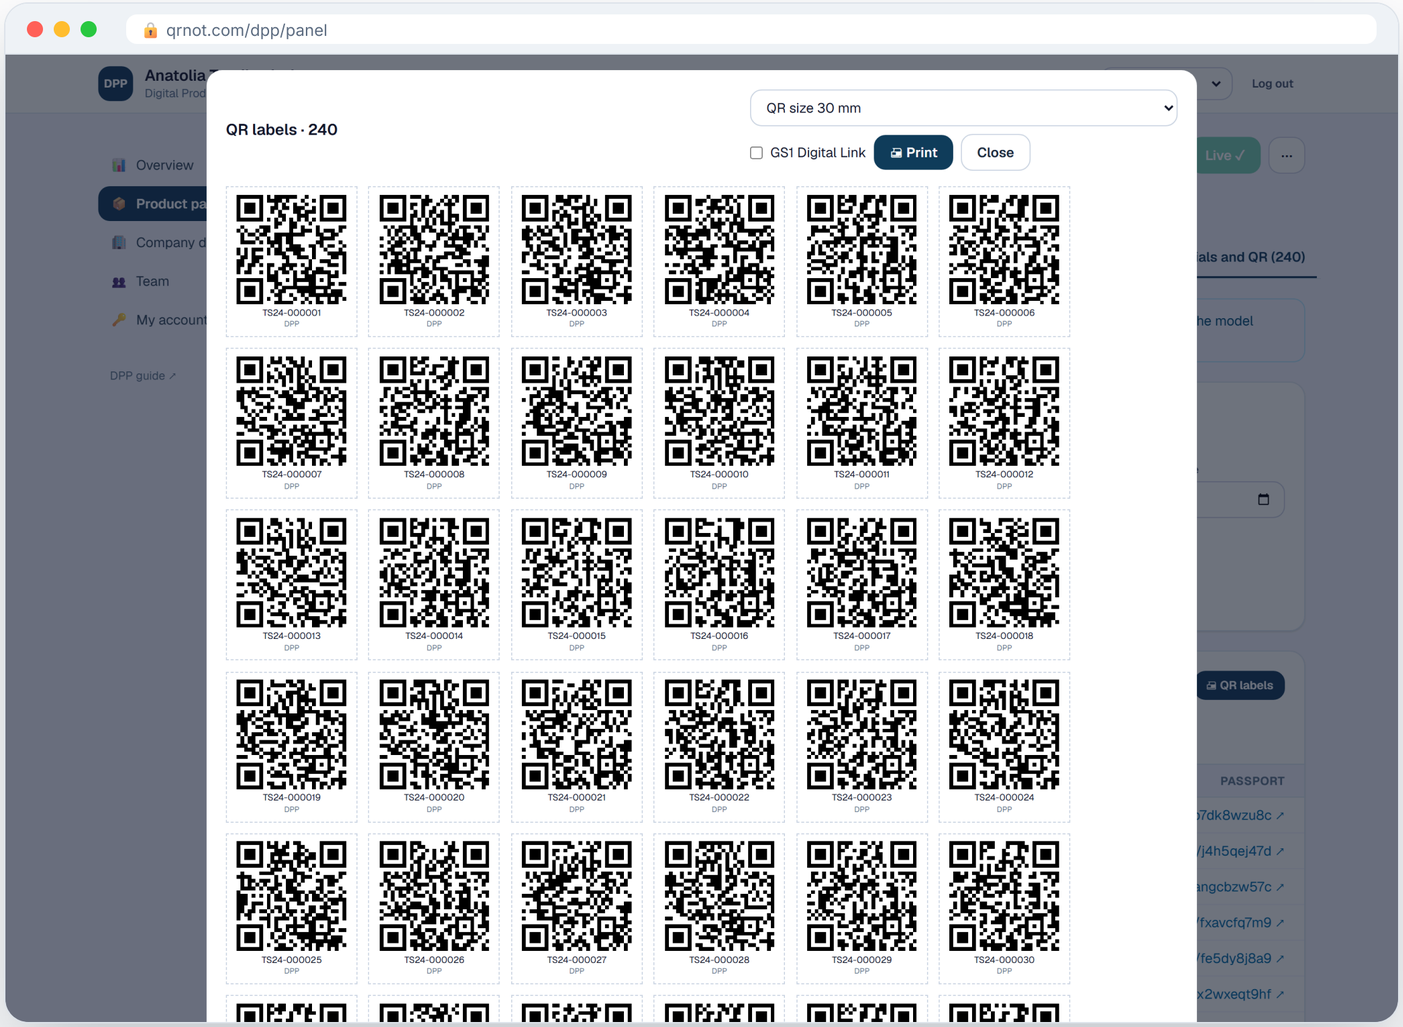

One QR per model, or a serialised passport per item. Generate serial numbers in the panel; print QR labels directly or feed the CSV to your laser / label software.

01 **Generate serials**
Prefix, start number, batch and date — up to 2,000 at a time

02 **Print labels**
25–50 mm QR label sheets or CSV export

03 **Apply**
On the product, care label or packaging

04 **Scan**
The item passport opens with serial, batch and date

GS1 Digital Link ready
`qrnot.com/01/{GTIN}/21/{serial}`

TRUST INFRASTRUCTURE

Audit-ready, permanent, controlled.

Versioned publishing

Every publication is stored as an immutable version. The QR URL never changes; no reprinting.

Authorised access

Suppliers, facility and dismantling notes are visible only with the key you give authorities and recyclers.

Archived, never deleted

Published passports cannot be deleted; discontinued products stay available with a notice.

Machine-readable data

Every passport is also served as JSON for compliance tools and integrations.

Draft vs. published

Changes in a draft stay invisible to visitors until you press Publish.

Audit trail and backups

Every change is logged, all data is backed up daily and deleted files can be restored for 30 days. Companies never see each other’s data.

In plain terms. QRNot DPP is ready-made infrastructure to collect, publish and apply your passport data today. We update the data model as EU technical standards and product-group rules are finalised. The manufacturer remains responsible for compliance; we make the process easier.

PLANS

How we start

01

Discovery

We discuss your product groups and export markets.

02

Pilot

We prepare passports for a few products together.

03

Labels

We fit QR / NFC labels to your production line.

04

Roll-out

We import the full collection via CSV.

Pilot
10 product models

Start with your first products.

Starter
50 product models

Small and mid-sized manufacturers.

Growth
200 product models

Growing collections with many suppliers.

Business
500 product models

Brands with large collections.

Enterprise
Unlimited

Integrations and priority support.

All plans include unlimited serial numbers and users, 8 languages, the supplier portal, documents and label printing. Pricing by quotation. Free 14-day demo: qrnot.com/dpp/demo?lang=en

QRNot DPP

Let’s prepare the first passport for your exports together.

Start with a pilot: we prepare passports for a few products and fit the labels to your production line.
